

Active ingredient
protection – at
high speed?
Why not!

Enables high solid content
dispersions for high
productivity, a fast soluble
aqueous film coating
compound.

Product Information

AquaPolish® HS

BIOGRUND's one-step film coating system **AquaPolish® HS** provides a protective and fast soluble film on tablets, pellets, granules and capsules.

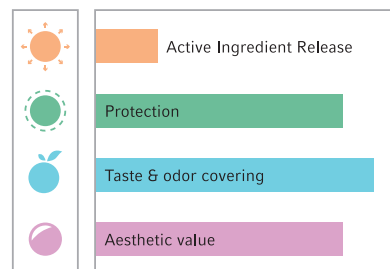

AquaPolish® HS is a combination of film-forming polymer **METHOCEL™** Premium VLV with plasticizing and coloring additives. The very low viscosity of HPMC enables high solid content dispersions for high speed productivity.

It is a homogeneous, dry-milled, powdered compound, developed for the coating of all kinds of solid dosage forms. It is easily soluble and a reproducible high-quality film coating can be guaranteed. Clear, white and colored preparations can be tailor-made according to customer requirements.

By using this very low viscosity film-forming polymer, a significant reduction in coating time can be achieved which speeds up your production. It can be applied by using conventional or modern coating equipment.

Regulatory and quality aspects: All **AquaPolish® HS** formulations are developed to meet the official regulatory requirements of the user's country for pharmaceutical products and for nutritional or dietary supplements.

Product Performance

General Information on BIOGRUND

Since 1999, **BIOGRUND** has been the specialist for the homogeneous mixing of excipients and carriers. With locations in Germany, Switzerland, America and Russia, we support the food supplement and pharmaceutical industry in the development, formulation and production of solid oral dosage forms. The tailor-made and ready-to-use special powder mixtures for film coating, sugar-coating, coloring and tableting enable optimum results in a short time. Easy, fast and reliable!
