

Enteric film coating for nutritional products? Why not!

Based on natural shellac, an aqueous film coating system, with excellent moisture sealing and enteric properties.

Product Information

BonuLac®

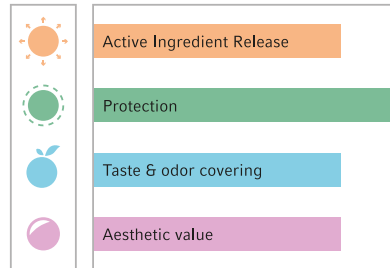

BIOGRUND's one-step film coating system **BonuLac®** provides a protective film with excellent moisture sealing and enteric properties. With its superior taste and moisture protection it is recommended for the coating of natural extracts, fatty oils and substances with bad taste and odor.

BonuLac® is a combination of natural shellac with plasticizers, coloring additives and additional excipients. It is a homogeneous, dry-milled, powdered compound, developed for the coating of all kinds of solid dosage forms.

Natural shellac is a film forming polymer, which gives enteric properties for nutritional products. It is easily soluble in water and a reproducible high quality film coating is guaranteed. Clear, white and colored preparations can be tailor-made according to customer requirements. **BonuLac®** can be applied by using conventional or modern coating equipment.

Regulatory and quality aspects: All **BonuLac®** formulations are developed to meet the official regulatory requirements of the user's country for pharmaceutical products and for nutritional or dietary supplements.

Product Performance

General Information on BIOGRUND

Since 1999, **BIOGRUND** has been the specialist for the homogeneous mixing of excipients and carriers. With locations in Germany, Switzerland, America and Russia, we support the food supplement and pharmaceutical industry in the development, formulation and production of solid oral dosage forms. The tailor-made and ready-to-use special powder mixtures for film coating, sugar-coating, coloring and tableting enable optimum results in a short time. Easy, fast and reliable!
