

3 in 1 - coating,
waxing and
polishing
with only one
excipient premix?
Why not!

Easy-to-use application for hot
melt coating of particles,
polishing of sugar-coated tablets
and anti-sticking of soft capsules.

Excipient for hot melt coating

Hot melt coating (HMC) offers many advantages compared to conventional solvent-based coating technologies. HMC avoids drying times and makes potentially toxic and expensive organic solvents such as ethanol and isopropanol superfluous. The faster process results in higher batch throughput, leads to higher production volumes and increases productivity. HMC is also an effective method to mask the often bitter taste of active ingredients and produce products with a pleasant mouth feel.

Our ready-to-use excipient premix BonuWax® for hot melt coating is a water and solvent free application and provides good moisture sealing, taste masking and stability for granules and particles. BonuWax®, consisting of carnauba and/or beeswax plus two additional lipids, has a suitable melting temperature and is easy to apply on particles and granules by a fluid bed coating process. BonuWax® can be sprayed with a 100% solid content which leads to a high productivity.

Polishing agent for sugar-coated tablets

If a shiny surface is requested for sugar-coated tablets, BonuWax® as a mixture of bee wax and carnauba wax can be used to achieve an excellent glossy finishing. Under the principle of friction, a brilliant gloss/shine will be realized, which leads to an aesthetic valorization for sugar-coated tablets.

- The application amount of BonuWax® varies between 0,03–0,15% per batch – depending on the construction type and size of the coater.
- The polishing process needs 10–25 minutes, depending on the construction type and size of the coater.
- Before using BonuWax® for polishing, the sugar-coated tablets should be dry, but not dusty.
- During the polishing process the supply air shouldn't be active. If the sugar-coated tablets begin to “slide”, supply air should be switched on. Sugar-coated tablets can be packed directly after the polishing process.

Anti-sticking agent for soft gelatine capsules

BonuWax® is formulated with different natural waxes and is highly stable to provide excellent transparency, anti-sticking properties (effective separation) and enhanced mechanical stability/flowability during processing and packaging. Waxed capsules also have higher resistance to external influences like humidity and temperature and are easier to swallow.

Conventional soft capsules tend to get moisturized and become softer because of their hygroscopic nature when stored in high temperature and high humidity environment.

As a consequence, adhesive property of surface of the soft capsules may be increased and sliding property of the soft capsules may be decreased, making packing and filling operations difficult, or the soft capsules may stick to each other or to the inner surface of the storage containers, and taking out of required amount of soft capsules may become difficult or the capsule membrane/ protective coating may be destroyed at the time of ingestion.

Therefore, an anti-sticking agent which can offer excellent anti-sticking effect for soft capsules without impairing various properties such as water activity, disintegration property and safety even when the soft capsules are stored in high temperature and high humidity environment, is important.

BonuWax® is easy-to-use in the drying tunnel by moistening the tissues and also in a conventional coating or polishing pan by manual pouring and polishing application.

General Information on BIOGRUND

Since 1999, **BIOGRUND** has been the specialist for the homogeneous mixing of excipients and carriers. With locations in Germany, Switzerland, America and Russia, we support the food supplement and pharmaceutical industry in the development, formulation and production of solid oral dosage forms. The tailor-made and ready-to-use special powder mixtures for film coating, sugar-coating, coloring and tableting enable optimum results in a short time. Easy, fast and reliable!
